

Wireless Indoor Asset Protection Sensors

**Make the Smart Move...
Protect Your Valuables from Theft**

Honeywell

An Asset to Your Security System

You've worked hard to afford things that make life more enjoyable. Now there's an easy way to protect your valuables and precious, irreplaceable heirlooms from theft thanks to Honeywell's state-of-the-art Wireless Indoor Asset Protection Sensors.

Guard Against Theft

Although you probably know that security systems are effective in preventing loss of life and property, you may not know about the critical role "movement-based" asset detection can play in preventing theft. Theft is different from burglary because it occurs without a break-in and the offender has a right to be on the premises (e.g. housekeepers, nannies, contractors, guests, etc.).

Enhanced Protection and Awareness

Honeywell's Wireless Indoor Asset Protection Sensors work with your security system to protect your valuables even if your alarm panel is disarmed (e.g. if contractors are coming in and out of the house and an asset is moved, a "detect" will still be triggered and you can be notified). Asset protection is an important component to your alarm system—helping to provide a complete, "whole-house" security solution while enhancing the burglary protection that's already there.

The discreet sensors affix easily to any valuable object requiring protection—notifying you with a chime at the keypad or a call from the central station if an attempt is made to move or disturb the protected object. They are ideal for:

- Flat screen TVs, gaming consoles and other electronics
- Antiques and heirlooms
- Paintings, vases, sculptures and artwork
- Computers and home office equipment
- Safes, cashboxes and gun cabinets
- Stamp and coin collections
- Tool boxes

Make the Smart Move

Honeywell's Wireless Asset Protection Sensors are an excellent complement to your new or existing security system—protecting your valuables and providing you with a higher level of awareness and the peace of mind you deserve. Make the smart move and ask your security professional for details today!

Totally Connected!

You can choose to combine the asset protection sensors with Honeywell's Total Connect digital communications solutions, which let you utilize the Internet and various mobile devices to receive updates about activity in and around your home, from any remote location. It's the best way to stay protected...and connected.

- If a protected asset is moved, you can receive e-mail alerts and notification via your PC or laptop, cell phone, BlackBerry® wireless handheld device or iPhone™
- Get the information you need so you can decide what action to take
- System can be customized to trigger an alarm in several ways, including sending a message, recording from a video camera or chiming a keypad
